

We currently have a measles outbreak
in our wonderful state of Texas.

In response, the Texas Department of
State Health Services has made
vaccine-related data more accessible
than ever before.

This data reveals that many children in Texas lack the MMR vaccine.

Texans' refusal to vaccinate their
children is reflective of vaccine
hesitancy generated by politcally
conservative views on healthcare.

Please vaccinate your children,
because "almost everyone without
immunity will get measles if exposed
to the virus" and "there is no
specific treatment to cure measles".
